## What's new in PCRI database Version 2.3?

- Additional data from six general partners.
- Updated Thomson Reuters Data incorporated
- Fund data from the City of Zurich Pension incorporated (270 funds)
- More detailed information on GP, fund, and portfolio company location, including the state for US-based funds/companies.
  - New variable names: `loc_state`, `loc_country`, `loc_region` describe the physical location of GPs, Funds, and Portfolio companies.
- Distinction between geographic focus and physical location of funds.
  - New fund variables: `geo_focus_country` and `geo_focus_region` describe the investment focus of a fund.
- Investment data includes `equity_usd` (total capital invested by a fund), `deal_value` (total value of deal including all co-invests), `deal_equity` (sum of capital invested by all co-investors), `deal_debt` (total new debt assumed by portfolio company at the time of a deal), `co-investment flag`
- Refined classification of `exit_type_id` variable to five categories.
- Additional research on sparser variables, including Fund Country Location, Company `year_founded`, GP `year_founded`.
- Improved data merging process with new alias program.
- How to Guide on merging tables using primary and foreign keys (pg. 17)

---

## About the Private Capital Research Institute

The Private Capital Research Institute (PCRI) is a non-profit organization that works to further the understanding of the economic impact of private capital through independent academic studies. PCRI's primary goal is to produce high quality academic research on the private capital industry based in large part on the comprehensive, centralized academic databases of private capital activity that the PCRI is building.

**For questions regarding the data, please email [info@pcrinstitute.org](mailto:info@pcrinstitute.org) or visit our website at [www.pcrinstitute.org](http://www.pcrinstitute.org).**

---

## Conditions of Data Access

- a. Access to the Data Sets is limited solely to Requestor. Requestor may not provide, give, lend, or in any way make accessible the Data Sets to any third party, including, but not limited to, other institutions or researchers with which Requestor is affiliated, unless any such person has signed and submitted a Data User Agreement.
- b. Requestor agrees to fulfill all pre-access Requirements
  - i. Requestor and, if Requestor is affiliated with an institution, either the head of Requestor's department at such institution or the Dean of Requestor's institution, in both cases with institutional signature authority, must sign this Agreement.
  - ii. Requestor must provide NORC with a pre-defined static or limited range IP Address from which Requestor will access data remotely, as access will only be permitted from this IP Address.
  - iii. Requestor shall use Data Sets solely as stated in the Proposal. Data Sets may not be used for any other purposes whatsoever, including, but not limited to, consulting or other activities of Requestor and administrative, commercial, regulatory, law enforcement, judicial, or other purposes. Requestor shall not download substantial portions of data from the Data Sets.
- c. In exchange for a lease fee payment by Requestor paid to NORC, NORC shall provide to Requestor a Thin Client Machine ("Thin Client"), which shall serve as Requestor's access node to the Data Sets. Requestor shall make no attempt to tamper with the configuration or security features of the Thin Client. Requestor shall use his or her best efforts to prevent unauthorized users from accessing the Thin Client. The Thin Client is the property of NORC and shall be returned to NORC at the expiration or termination of this Agreement.
- d. Requestor shall not attempt to compromise the security of the computing environment by circumventing any access controls, sharing passwords or rights of access to the Data Sets or by capturing or sharing any images or information from the Data Sets. Without limiting the foregoing, Requestor shall not use screen capture software or devices, screen sharing software or devices or allow unauthorized users to view the Data Sets.
- e. At PCRI's discretion, the names and addresses of any companies for which the Data Sets contain data may be replaced with a new variable name or address that does not identify the company. Requestor shall not attempt to identify providers of individual items of data to the Data Sets other than as disclosed by NORC and/or PCRI. Within 24 hours of the time when a Requestor becomes aware that any such information may have been identified, Requestor shall notify NORC and PCRI of the disclosure, inadvertent or otherwise. Requestor shall use his or her best efforts to destroy, retract or otherwise safeguard from further dissemination the materials containing such information.

- 
- f. All research output, such as statistical results and reports derived using Stata and SAS (or any other statistical analysis programs), must be reviewed by NORC and/or PCRI to ensure that the disclosure protection standards are met.
  - g. Requestor agrees to provide any work containing data derived from the Data Sets for review by NORC and PCRI at least thirty (30) days prior to the submission of such work for publication. Requestor shall not publish any work containing data derived from Data Sets without first deleting NORC's and/or PCRI's confidential and/or proprietary information as identified by NORC and/or PCRI during their review.
  - h. Requestor agrees to provide NORC and PCRI with copies of any work containing data derived from Data Sets within ninety (90) days of the publication date of such work.
  - i. Requestor agrees to credit PCRI and the NORC Data Enclave, as specified by NORC and PCRI, for any work containing data derived from Data Sets. In no event shall any such credit state or imply that NORC or PCRI endorse Requestor's research or research results.

---

## Confidentiality

Except as authorized under this Agreement, Requestor shall not use or disclose any information obtained through the Data Sets or Data Enclave or any other proprietary or confidential information provided by PCRI or NORC and identified by them as such ("Confidential Information"). In no case shall Requestor use Confidential Information to identify by name or distinguishing characteristics any company of which Requestor learns about in the course of Requestor's research. Except as permitted and in connection with published research, Requestor shall keep all Confidential Information in confidence during and after the term of this Agreement unless any such Confidential Information (i) is or becomes generally publicly known and available, through no act or omission by the Requestor, or (ii) was rightfully in Requestor's possession free of any obligation of confidence at or prior to the time it was used or disclosed by Requestor. Requestor may disclose Confidential Information as and to the extent required by a valid order of a court or other governmental body, as otherwise required by law. Upon the request of NORC or PCRI, Requestor shall return to NORC and/or PCRI, as applicable, any Confidential Information in tangible form within ten (10) business days of such request.

## *Breaches*

NORC shall promptly notify PCRI of any material breach of this Agreement by Requestor. NORC and PCRI may treat any breaches of this Agreement as violations of their policies and procedures on scientific integrity and misconduct. If NORC and PCRI deem Requestor to have breached this Agreement, each of them may:

- a. Deny Requestor any further access to the Data Sets and the Data Enclave.
- b. Withhold from Requestor undelivered data output from Requestor.
- c. Report the violation to the appropriate authorities at Requestor's institution (and other authorities, as applicable and appropriate) and recommend sanctions be imposed.
- d. Pursue all other remedies that may be available to under law or equity, including injunctive relief to prevent Requestor's use of any data derived from the Data Sets.
- e. Terminate this Agreement.

---

## ***Monitoring Usage***

- a. NORC and PCRI may take any reasonable steps to monitor Requestor's use of the Data Sets and access to the Data Enclave to ensure that Requestor complies with this Agreement. Such steps may include, without limitation, the following:
  - i. A Data Enclave researcher assistant or member of PCRI may contact Requestor to confirm compliance with this Agreement.
  - ii. NORC may maintain a full record of all computer-based interactions with the Data Sets at a keystroke level of detail and provide PCRI with such records.
  - iii. NORC and PCRI may review all data output derived by Requestor from the Data Sets.
- b. PCRI has the right to share the following information for the purpose of complying with any reporting or auditing obligations to its data providers:
  - i. Requestor's name, address, e-mail address, telephone number, and name of the Requestor's department at his or her institution (if applicable); and
  - ii. The name and address of Requestor's institution.

## Table Descriptions

### *Company Table*

\\enclave.local\pcri\Datasets\company.dta

Information on portfolio companies involved in private capital transactions.

Variable Name	Definition
company_id	Unique identifier of a portfolio company. <b>Primary Key.</b>
year_founded	Self-reported year the portfolio company was founded
nvca <sup>1</sup>	Industry code for the portfolio company based on the National Venture Capital Association 17 industry categories. See appendix for the nvca codes. Labeled “Multi-sector” if multiple NVCA codes are determined
company_status	Status of the company as of status date. See Appendix for definitions of status classifications.
status_date	As of date for company status. If unavailable, then the status date is current date.
loc_state	State of portfolio company’s headquarters. See appendix for state codes. Missing if company is not headquartered in United States
loc_country	Country of portfolio company’s headquarters. See appendix for country codes. Labeled “MULTINATIONAL” if company lists multiple countries
loc_region	Region of portfolio company’s headquarters. See appendix for region codes. Labeled “MULTIGEOGRAPHY” if company lists multiple regions

<sup>1</sup> Industry classification is based on the 17 National Venture Capital Association (NVCA) categories. The PCRI creates mapping between SIC codes, GIC codes and business descriptions into the 17 NVCA industry categories.

---

## **Exit Table**

\\enclave.local\pcri\Datasets\exit.dta

Information on Exit transactions of private capital investments: an exit is included if there is an associated private capital firm, date of transaction and an associated portfolio company.

---

<b>Variable</b>	<b>Definition</b>
exit_id	Unique identifier of an exit transaction. <b>Primary Key.</b>
company_id	Identifies the portfolio company in the exit transaction. <b>Foreign Key.</b>
gp_id	Identifies the investing private capital firm exiting the investment. <b>Foreign Key.</b>
date	Date of exit transaction (possibly an estimated date); encoded as a Stata® date.
amount_usd	Total size of exit consideration in millions of USD. In some cases, this is an estimated amount. Note: In syndicated deals, this is the total amount for all firms
exit_type_id	Method of exit. See Appendix for type of exit.
exit_listing_exchange	Stock exchange where public shares are listed if IPO. See Appendix for list of exchanges. Variable set to missing if transaction was not an IPO.

---

## **Fund Table**

\\enclave.local\pcri\Datasets\fund.dta

Information on private capital funds.

<b>Variable</b>	<b>Definition</b>
fund_id	Unique identifier of a fund. Primary Key
vintage_year	Vintage year of fund or origination year of the fund. If Vintage Year is missing, we replace with the year of first investment of the fund.
nvca <sup>2</sup>	Industry focus of the fund. Industry code for the portfolio company based on the National Venture Capital Association 17 industry categories. See appendix for the nvca codes. Labeled "Multi-sector" if multiple NVCA codes are determined
fund_type	Fund's classification – see appendix for Fund_type
fund_size	Total committed amount of the fund in millions of US dollars.
geo_focus_country	Geographic focus of the fund. This variable is given or we infer from the portfolio companies within a fund. See Appendix for country codes.
geo_focus_region	Regional focus of the fund. This variable is given or we infer from the portfolio companies within a fund. See Appendix for region codes
loc_state	US State of fund's headquarters, if applicable. Missing if fund is not headquartered in United States. See Appendix for state codes.
loc_country	Country of fund's headquarters. See Appendix for country codes.
loc_region	Region of fund's headquarters. Labeled "MULTIGEOGRAPHY" if fund lists multiple regions. See Appendix for region codes

<sup>2</sup> Industry classification is based on the 17 National Venture Capital Association (NVCA) categories. The PCRI creates mapping between SIC codes, GIC codes and business descriptions into the 17 NVCA industry categories.

---

**Fund Performance Table:**

```
\\enclave.local\pcri\Datasets\fund_performance.dta
```

Information on private capital fund performance.

---

Variable	Definition
performance_id	Unique identifier of a fund in a specific quarter. <b>Primary Key.</b>
fund_id	Unique identifier of the fund. <b>Foreign Key.</b>
report_date	Date of performance report; stored as Stata® quarter
mic_net_distributed	Net distributed cash flow as a multiple of invested capital: Cumulative net cash out divided by cumulative cash in or $\frac{\sum \text{Cash out}}{\sum \text{Cash in}}$
mic_net_residual	Net residual as a multiple of invested capital: Total assets under management divided by cumulative net cash in or $\frac{\sum \text{Unrealized Assets}}{\sum \text{Cash in}}$
mic_net_total	Total value of net distributed and residual as a multiple of invested capital: cumulative net cash out plus total assets under management as a multiple of invested capital or $\frac{\sum \text{Cash out} + \text{Unrealized Assets}}{\sum \text{Cash in}}$
reported_net_irr	Reported IRR as of the report date, net of fees

---

---

**Fund Quarterly Cashflow Table:**

```
\\enclave.local\pcri\Datasets\fund_quarterly_cashflow.dta
```

Private capital fund cash flows.

---

Variable	Definition
cashflow_id	Unique identifier of a fund in a specific quarter. <b>Primary Key.</b>
fund_id	Identifier of the fund. <b>Foreign Key.</b>
report_date	Date of cash flow report; stored as Stata® quarter
net_cash_in <sup>3</sup>	Cash transferred into fund in a given quarter, net of fees.
net_cash_out <sup>3</sup>	Cash distributions from a fund in a given quarter, net of fees
cumulative_net_cash_in	Sum of all cash transferred into a fund as of reported date, net of fees
cumulative_net_cash_out	Sum of all cash distributions from a fund as of reported date, net of fees
total_aum	Total unrealized value of assets under management

---

<sup>3</sup> The cash flows we receive typically represent the cash flow amounts for a particular fund for an *individual* limited partner. Consequently, we scale up an individual LP's cash flows to infer a total fund cash flow. Thus, in order to scale up, we need to have an LP's commitment as a percentage of the entire fund.

---

**GP Table**

```
\\enclave.local\pcri\Datasets\gp.dta
```

Information on the individual private capital firms.

---

Variable	Definition
gp_id	Unique identifier for private capital firm. <b>Primary Key.</b>
year_founded	Year the private capital firm was founded
gp_status	Investing status of firm. See Appendix for Status definitions.
gp_type	GP's classification – see Appendix for GP classifications.
loc_country	Country of firm's headquarters. See Appendix for country codes. Labeled "MULTINATIONAL" if firm lists multiple countries
loc_region	Region of firm's headquarters. See appendix for region codes. Labeled "MULTIGEOGRAPHY" if firm lists multiple regions

---

---

## ***Investment Table***

\\enclave.local\pcri\Datasets\investment.dta

Information on private capital investments.

---

<b>Variable</b>	<b>Definition</b>
investment_id	Unique identifier of an investment, which involves a company, private capital firm(s) and date. <b>Primary Key.</b>
company_id	Unique identifier of the portfolio company. <b>Foreign Key.</b>
gp_id	Unique identifier of the investing firm(s). <b>Foreign Key.</b>
fund_id	Identifier of the fund(s) in the investment. Foreign Key.
date	Date of investment round (in some instances, this is an estimated date); encoded as a Stata® date
investment_type	Investments are categorized into five main categories. See Appendix for investment types.
investment_subtype	See Appendix for subtypes. 31 categories.
equity_usd	Total capital invested by fund in millions USD. Includes common stock, convertible common stock, convertible preferred stock, warrants, options, debentures
deal_value	Total size of deal in millions of USD for round, includes co-invests
deal_equity	Sum of total capital invested by of all co-investors in millions USD
deal_debt	Total amount of debt in millions USD assumed by the portfolio company at the time of the deal
co_invest	equals 1 if investment by multiple funds
exit_flag [Not Available]	equal to 1 if company has exited equal to 0, otherwise

---

**Deal Table:**

```
\\enclave.local\pcri\Datasets\deal.dta
```

**[NOT AVAILABLE in this release]**

Information on private capital deals

Variable	Definition
deal_id	Unique identifier of a deal, which involves a company and date. <b>Primary Key.</b>
company_id	Unique identifier of the portfolio company. <b>Foreign Key.</b>
date	Date of deal or investment round (in some instances, this is an estimated date); encoded as a Stata <sup>®</sup> date
deal_value	Total size of investment in millions of USD. In some instances, this is an estimate.
deal_equity	Amount of the deal that is equity in millions of USD. In some instances, this is an estimate.
deal_debt	Amount of the deal that is debt in millions of USD.
round_num	The investment round number for a company

## Keys

Keys provide the link between *two* tables and enable you to easily merge them. The merging process is explained in more detail in the next section. A Primary Key is a *unique* variable in a table. A Foreign Key is a variable that provides a link to another table. A Foreign Key is *not* necessarily unique in a table.

### ***Fund Company Map***

Variable	Definition
fund_id	Foreign key from Fund table
company_id	Foreign key from Company table

### ***GP Company Map***

Variable	Definition
gp_id	Foreign key from GP table
company_id	Foreign key from Company table

### ***GP Fund Map***

Variable	Definition
gp_id	Foreign key from GP table
fund_id	Foreign key from Fund table

### ***Foreign Keys***

Table Name	Primary Key	Foreign Key	Number of Rows
Company	company_id	none	110,836
Exit	exit_id	company_id, gp_id	31,252
Fund	fund_id	none	33,402
Fund_Performance	performance_id	fund_id	42,433
Fund_Quarterly_Cashflow	cashflow_id	fund_id	45,640
GP	gp_id	none	17,656
Investment	Investment_id	company_id, gp_id	428,214
Fund_Company_Map	none	fund_id, company_id	227,087
GP_Company_Map	none	gp_id, company_id	273,573
GP_Fund_Map	none	gp_id, company_id	37,246

## How to merge tables using the concept of keys

In order to merge tables, it is necessary to understand the concept of keys in a database. There are two types of keys: 1) primary and 2) foreign.

- 1) A primary key is a variable which *uniquely identifies observations* in a table.

investment_id	currency_id	fund_id	max_amount_usd	...
1	EUR	84	25	...
2	USD	84	25	...
3	EUR	3	25	...
4	AUD	72	1.6	...
4	USD	72	1.6	...

Figure 1

In this case, investment\_id is the primary key. Each of its values corresponds to exactly one unique row of data. Note: if the primary key appears more than once, the observation is a duplicate and should be removed using the duplicates drop command.

Currency\_id, on the other hand, could *not* act as a primary key. This is because the value “USD” could refer to either one of the two lines highlighted above.

- 2) A foreign key is the *primary key of another table*. For instance, the fund\_id variable in Figure 1 is actually the primary key for the following fund table:

fund_id	vintage_year	nvca
1	2008	Multi-Sector
2	1997	Biotechnology
3	2003	Telecommunications

Figure 2

Foreign keys establish connections between tables by linking to unique rows of data. A table may have any number of foreign keys, but only one primary key. These concepts underpin the structure of a relational database.

## Merges

The merge command in Stata allows the user to combine tables by *matching foreign keys to the respective tables in which they are primary keys*. There are many types of merges, but this guide will

cover those which will be used most frequently in conjunction with the PCRI database. For a more in-depth description, refer to the online Stata manual (<http://www.stata.com/manuals13/dmerge.pdf>).

### 1) The many-to-one merge (m:1)

To perform a m:1 merge, we start by identifying the merge variable. This variable is the foreign key in one table and the primary key in the other.

- The table containing the foreign key is called the master dataset
- The table containing the primary key is called the using dataset

A m:1 merge will link the *many* rows of data in the master dataset to *one* unique row in the using dataset. Doing this in Stata is straightforward: with the master dataset open, enter the merge command. The syntax is as follows:

```
merge m:1 <merge_variable> using \\enclave.local\pcri\Datasets\<using_dataset>
```

Input the `merge m:1` keyword, followed by the merge variable, followed by the file path of the using dataset. The file path for all PCRI tables will always begin as stated above.

To illustrate this process, let us take a look at how to merge the Investment and Fund tables (Figures 1 and 2). The variable on which we merge is `fund_id`, since it is the foreign key in the Investment table and the primary key in the Fund table. Therefore, Investment.dta is the master dataset and Fund.dta is the using dataset. The image below illustrates the linking process:

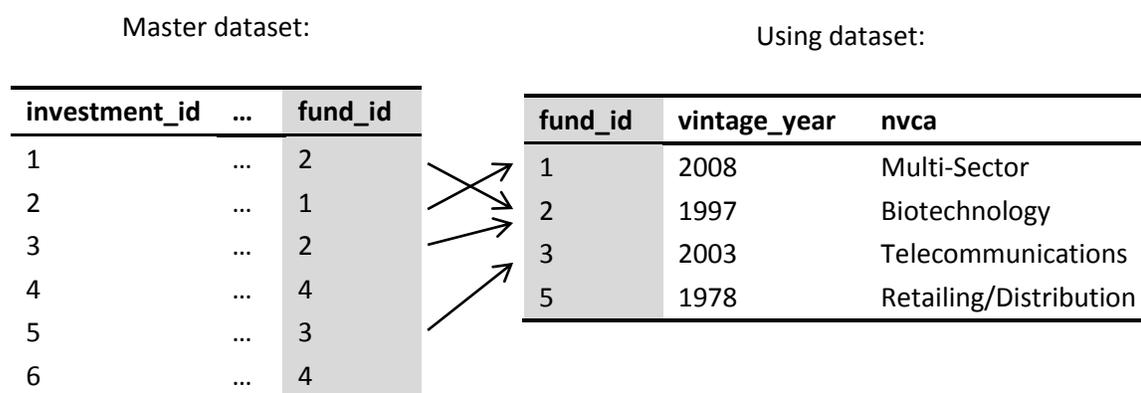

Figure 3

The result of our merge is a wider and longer table of investments with `vintage_year` and `nvca` information:

investment_id	...	fund_id	vintage_year	nvca	_merge
1	...	2	1997	Biotechnology	3
2	...	1	2008	Multi-Sector	3
3	...	2	1997	Biotechnology	3
4	...	4	.		1
5	...	3	2003	Telecommunications	3
6	...	4	.		1
.	...	5	1978	Retailing/Distribution	2

Figure 4

Note that some data points are missing. This is because an instance of `fund_id` might appear in one table but not in the other. To keep track of this, Stata automatically adds an additional variable, called `_merge`, which can take on one of three values:

**I. `_merge` equals 3**

The merge variable shows up in both datasets, yielding a complete row of information.

**II. `_merge` equals 2**

The merge variable only shows up in the using dataset, yielding null values for the master dataset observations. Since these missing variables include the newly formed table's primary key, it is customary to drop these observations.

**III. `_merge` equals 1**

The merge variable only shows up in the master dataset, yielding null values for the using dataset observations. It is optional whether or not to drop these lines.

Upon completing the merge, Stata displays a table containing the number of observations for each of these outcomes. Use this table to determine how effectively the tables have been merged. Ideally, we will find a large number of observations for which `_merge` equals 3. The `_merge` variable is typically dropped after these operations are completed (`drop _merge`).

In conclusion, the full Stata input for this scenario would be:

```
merge m:1 fund_id using \\enclave.local\pcri\Datasets\Fund
drop if _merge==2
drop _merge
```

## 2) The many-to-many merge (m:m)

There could be situations in which there aren't primary-foreign key pairs on which to merge. In these cases, a m:m merge is required. A m:m merge will link the *many* rows of data in the master dataset to *many* rows in the using dataset.

There is only one scenario within the PCRI database which calls for such a merge: combining the Investment and Exit tables. It is not advisable to perform this merge under any other circumstances, as this may cause runtime issues.

To perform a m:m merge, we start by identifying the merge variable. The purpose of merging the Investment and Exit tables is to view observations at the company level. Therefore, `company_id` is the merge variable. Note that it acts as the foreign key in *both* tables, meaning the master and using datasets are interchangeable. However, it is best practice to make the Investment.dta the master dataset. Once it is open, enter the following Stata command:

```
merge m:m company_id using \\enclave.local\pcri\Datasets\Exit
```

Input the `merge m:m` keyword, followed by the merge variable, followed by the file path of the using dataset. The resulting `_merge` variable has the same meaning as in the previous section, but with different implications:

### I. `_merge equals 3`

The merge variable shows up in both datasets, yielding a complete row of information.

### II. `_merge equals 2`

The merge variable only shows up in the using dataset, yielding null values for the master dataset observations. This probably means the company investment occurred before the timeframe of the PCRI database.

### III. `_merge equals 1`

The merge variable only shows up in the master dataset, yielding null values for the using dataset observations. This can mean one of three things:

1. Exit information is not known
2. The company has not exited yet.
3. The company is defunct.

It is up to the researcher's discretion to determine which observations to keep.

## Appendix

<i>company_status</i>	<i>Description</i>
public	Public company
private	Private company
subsidiary	Subsidiary company
defunct	Out of business
other	Government owned

<i>exit_listing_exchange</i>	<i>Stock Exchange Name</i>
AEX	Euronext Amsterdam, Amsterdam Stock Exchange
BIST	Istanbul Stock Exchange
BOSE	Botswana Stock Exchange
BSE	Bombay Stock Exchange
BSE-B	Boston Stock Exchange
BUX	Budapest Stock Exchange
CASE	Casablanca Stock Exchange
CSE	Copenhagen Stock Exchange
EBR	Euronext Brussels
FWB	Frankfurt Stock Exchange/ Neuer Markt
HKSE	Hong Kong Stock Exchange
ISE	Irish Stock Exchange (now part of LSE)
MLSE	Borso Italiano/ Nuovo Mercato/ Milan Stock Exchange
NISE	Nigerian Stock Exchange
NSE	National Stock Exchange of India
OMX	Nordic Stock Exchange Group
OSE	Oslo Bord/ Norwegian Stock Exchange
PAR	Euronext Paris/ Nouveau Marche/ Reglement Mensuel
SSE	Shanghai Stock Exchange
TYO	Tokyo Stock Exchange

<b>exit_type_id</b>	<b>Definition</b>
sale	Sale of company to investors
ipo	Initial Public Offering, or the first sale of stock by a private company to the public
other	dividends, income distribution (distribution of earnings to investors by issuing dividends) and stock distribution (distribution of earnings to investors by issuing stock/equity stake) and other distributions
restructure	recapitalizations, refinancings, restructures, and dividend recapitalization (occurs when a company incurs new debt to pay a special dividend to private investors or shareholders. This usually involves a company owned by a private investment firm that can authorize a dividend recap as an alternative to selling its equity stake in the company).
defunct	includes bankruptcies and write-offs

<b>fund_type</b>	<b>Includes:</b>
buyout	Buyout, Multi-stage, Balanced Stage, Core, Energy, Generalist, Turnaround
vc	Early Stage, Seed Stage, Venture Capital
second	Secondary
growth equity	Growth, Later Stage
other	Fund of Funds, Hedge Fund, Infrastructure, Mezzanine, Microfinance, Other, Real Estate, Quoted, Pre-IPO, Value-Add, Co-investment/Annex, Microfinance, Opportunistic, Mutual Funds

<b>gp_status</b>	<b>Includes:</b>
